

Core Curriculum Information Sheet

Course Information:

Course name-Future Cities International Workshop;

Course number-M511035B;

Credit-2.0; Learning hours-32.0

Classroom Teacher:

Name of teacher responsible-Zhang Chun; Title-Professor;

Name of teacher responsible-Li Jingwei; Title-Lecturer

Course Introduction:

This course is designed for international students to help them understand the cutting-edge knowledge and technology of urban planning through course teaching and field case introduction, so as to better serve the development and construction of future cities in their own countries. Sustainable Urban Development is a typical representative among ideas of the Future City, and it is also the scientific research direction of the scholar team of Beijing Jiao tong University for decades. The workshop of this year has received support from the 3rd Park City Forum and the 6th International High-level Forum on Sustainable Urban Development. Top experts and scholars will be invited to share their latest research and practice, and the field case studies in Chengdu and Beijing will be shared through on-site field visits.

Course Objectives:

It is hoped that students can not only master relevant knowledge, but also comprehensively apply the concepts learned from the course to research, design and solve problems. Finally, through course learning, students can also enhance their rational thinking in their understanding of the complex social and spatial systems in their own countries, and improve their future career development pattern and space in the competition and cooperation relationship.
